## Home battery systems

Store your excess solar power or off-peak grid electricity with a home battery system and save money on your home electricity costs.

### BENEFITS OF INSTALLING A HOME BATTERY SYSTEM

- **Reliable power:** Home battery systems store excess electricity to keep your essential appliances running even with a sudden power outage.
- **Lower energy costs:** Installing a home battery system allows you to store energy during the day, which can be used during peak times when electricity rates are higher.
- **Maximise your solar panels:** Store the energy your solar panels generate during the day for use at night, protecting yourself from rising utility costs.
- **Built to last:** Our high-quality home battery systems can last up to 15 years with outstanding performance backed by a strong manufacturer's warranty.

### SAVE 30% ON YOUR NEW HOME BATTERY SYSTEM

Thanks to the Australian Government's new Cheaper Home Batteries Program, you could save up to 30% on the cost of installing a small-scale home battery system.

If your chosen system is eligible, the discount is typically applied upfront by us making it easier and more affordable than ever to get a home battery system.

### HOME BATTERY INSTALLATION BY TMS

Total Maintenance Solutions (TMS) specialises in installing high-quality home battery systems that deliver reliable power and long-term energy savings for homeowners around Geelong, the Bellarine Peninsula, Surf Coast, Golden Plains region, Colac and the Otway Shire.

Interested in a safe, reliable home battery system? Our licensed electricians manage the entire process, from initial consultation through to installation, all while ensuring compliance with strict Australian safety standards. Call TMS on (03) 5277 9699 for a personalised quote—and don't forget, you could save up to 30% with the new federal rebate.
